Macleod and District Board of Trade Has Made Record Of Intelligent Endeavor

On Tuesday evening last in the Town Hall a general meeting of the Board of Trade was held immediately following the executive meeting of the Board of Trade. The meeting was called by J. W. McDonald, president of the Board of Trade, and was attended by a large number of the members of the Board of Trade. The meeting was held in the Chamber of Commerce, of Missoula, and was held for the purpose of discussing the matter of the Board of Trade's recent visit to the town of Macleod, and the Board of Trade's recent visit to the town of Macleod, and the Board of Trade's recent visit to the town of Macleod.

EXPLANATION DEFERRED

It will be noticed by the general reading public that the matter of the liquor scandal which was aired by J. W. McDonald early in the year has not been explained by Attorney-General Brownlee. Although he promised to attempt an explanation of the possible excuse or reason for using our Provincial Police to escort the liquor from Coleman to the boundary line, this remains unexplained by the Attorney-General. Surely if the Attorney-General has any explanation for it he will make that explanation.

QUEER

It is a queer thing that the R. C. M. P. detachment is to be situated at Lethbridge instead of Macleod. It seems that our Federal member's attitude towards the matter is responsible for this condition of affairs. Why is it that Lethbridge was able to get the R. C. M. P. We have the advantage of good location, good buildings and plenty of space, none of these being adequate at Lethbridge. They have more political pull than we have. That is all the advantage which Lethbridge has. Poor old Macleod. We certainly have put in a very live Federal member. He made enquiries at the last session as to the price of some rugs supplied to the parliament building.

UNITED STATES AND A WORLD COURT

Political leaders in the United States are sounding public opinion there on the question whether or not their country should identify itself with a tribunal for the settlement of differences between nations. While President Harding did not insist upon acceptance of the existing Court of International Justice, he did favor adherence by the Republic to some such judicial tribunal. On the other hand, Senator Hiram Johnson, who was one of the leading Republican opponents of ratification by the United States of the Versailles Treaty and the League of Nations Covenant, has declared against the President's proposal. Similarly, Senator Oscar W. Underwood of Alabama, mentioned as a possible candidate for the Democratic nomination for the Presidency, shows a tendency to divert attention from the international question to the domestic problems of the land.

The conflict of views in the United States with respect of a "world court" is the more remarkable because our neighbors have been to the fore in advocacy of judicial settlement or arbitration of international disputes. American publicists have argued in favor of such means of arranging difficulties; presidents have suggested them in their messages to Congress; and one United States millionaire devoted large sums of money to the establishment of The Hague tribunal. The campaign for peaceful settlement of differences between nations seemed to have reached its peak when President Woodrow Wilson urged the creation of the League of Nations at the termination of the war. Suddenly however, opposition arose in the United States' Senate. By the majority of that body it was held that the League Covenant would commit the United States to arbitrary operations in Europe regardless of the sentiments of the people on the question involved; and also that membership in the League would constitute a direct violation of George Washington's doctrine of non-intervention in European affairs. For these reasons, chiefly, the League was rejected by the Senate and the Democratic candidate suffered defeat at the ensuing presidential election.

Since then President Harding pronounced in favor of a "world court." His party's candidate for the governorship of Minnesota, nevertheless, has been defeated by Magnus Johnson, who called for consideration of domestic problems rather than foreign relations. The issue is one which will divide the Republican convention which is assembling to nominate a candidate for the Presidency. From all indications, it is likely also to be a bone of contention in the Democratic convention.

TONIGHT

There are already two Kiplings—the Kipling of the nineteenth century and the Kipling of the first decade of the twentieth. There are those readers who like better the first; those who prefer the second. Remarkably rich were the years of writing done in the office of the Civil and Military Gazette of Lahore, in the Embankment Chambers in Villiers Street, London, in the "Naulakha" in Vermont, and at Rottengden. To touch just the highlights, in prose, "The Man Who Would Be King," "The Finest Story in the World," "The Record of Badulla Herodotus," "Without Benefit of Clergy," "The Brushwood Boy," in verse, "Mandalay," "The Recessional," "The True Romance." Yet paying tribute to the earlier work is no reason for disparaging the achievement of the later years which many persons are inclined to overlook. To the later years belong "Kim," in which Kipling first essayed to write greatly on a broad canvas, for the earlier "The Naulakha," written in collaboration with Wolcott Balestier, and "Captains Courageous" were designed merely as entertaining tales. Then, to make the great short stories of his youth there are "An Habitation Enforced," "With the Night Mail," "They," "A Centurion of the Thirtieth" and "On the Great Wall." Poetry? In England they hold that "Sussex," written in 1902, is his masterpiece while the amazing vision as well as beauty one cannot turn too often to "France," written in 1913.

RACE FOR AIR SUPREMACY

Premier Baldwin's announcement that Great Britain intends to increase her Air Force by thirty-four squadrons, or between 340 and 400 machines, has awakened much interest in continental Europe, and has raised the question whether or not an international agreement to limit air armaments is desirable. Great Britain's Air Force at present consists of thirty squadrons, apart from some time ago sanctioned the creation of eighteen more squadrons, which ten will be ready at the end of the present year. The Government now intends to provide a further addition to the force of 34 squadrons. Thus, when this program of construction is completed Britain will have eighty-four squadrons, exclusive of those in India. She will allocate to home defence fifty-two squadrons, part of which will be established on a militia basis. France too, has been actively engaged in the augmentation of her military air forces, and both Great Britain and France have been encouraging civil aviation.

Some of the French newspapers commenting upon Premier Baldwin's announcement, assert that French preparations are measured only by the German danger. Others regard that announcement and the situation in Germany as a warning to France to continue developing service laboratories, meteorological stations and future defensive bases. Still others conclude that a race for air supremacy has been begun, and that an air convention between England and France is preferable to such a competition. The Washington Naval Disarmament Treaty limited the tonnage of naval aircraft carriers and so placed a limit upon the number of aeroplanes available for naval purposes. By the treaty, the aggregate tonnage of the aircraft carriers of the British Navy is limited to 135,000 tons. No limitation is placed, however, upon the military forces of any nation. Premier Baldwin, when he announced the Government's intention to add to the country's air forces, stated that the decision was animated by no spirit of challenge, but was solely for the purpose of home defence. He added: "In conformity with our obligation under the covenant of the League of Nations, His Majesty's Government would gladly co-operate with other Governments in limiting the strength of air armaments, on lines similar to the Treaty of Washington in the case of the navy, and any such arrangement, it is needless to say, would govern the policy of air expansion set out in this statement."

Great Britain, therefore, while she has taken steps to provide for her own defence, has proclaimed her readiness to acquiesce in mutual disarmament. The United States, which is less interested than European countries in the establishment of defensive or offensive air forces, has already through its Congress expressed a desire for a world agreement on air power. The difficulty seems to be that an attempt to curtail military air forces without restricting the growth of civil aviation would be vain because any aeroplane which can take the air can be used for military purposes.

ARE KIPLING'S WRITING DAYS NEARLY OVER?

Rudyard Kipling is nearing sixty years of age, and to many of his admirers it looks as though his writing were nearly done. But even as there have been two Kiplings, one of the old and one of the new century, there can be a third Kipling. What is the way done? Will the great stresses, anxieties and epochal events of the last eight or nine years provoke a new major strain in the bard of Batemans, Burwash, Sussex? The subject has a great deal of interest for lovers of literature the world round, for anything from Rudyard Kipling is noted everywhere. A writer in the New York Herald speculates in an interesting way on the psychological and material facts in the case and to him, at least, the question of another Kipling is still an open one to be answered by Time. Sixty is young for a writer if the muse be still in full life.

A Wanderer Once

In his early years Kipling was dashing off to the ends of the earth, leading a life through hazy countries. Now he wanders, silk-hatted and frock-coated, through college halls. His writing is not important. He has been living and suffering too much. But perhaps this is a crisis like that which occurred about the beginning of the century and produced the second Kipling, so much different from the first. It was twenty-four years ago, after the apotheosis of Rudyard Kipling's fame when for weeks he had been lying at death's door in New York, and from all nations were coming messages of sympathy, that there was current the saying that the man had lived but that the writer had died. The work of subsequent years has proved that the saying was, paradoxically at once utterly false and partially true. He was no longer the Kipling of "Department Ditties," the stories of "Plain Tales From the Hills," and of the flippancy and exaggeration which marked "Jordan

Notes." But in place of the man who was gone there appeared a finer poet, a subtler teller of tales, a master of style no longer dependent upon such catch phrases as "But that is another story."

Opinion Divided

There are already two Kiplings—the Kipling of the nineteenth century and the Kipling of the first decade of the twentieth. There are those readers who like better the first; those who prefer the second. Remarkably rich were the years of writing done in the office of the Civil and Military Gazette of Lahore, in the Embankment Chambers in Villiers Street, London, in the "Naulakha" in Vermont, and at Rottengden. To touch just the highlights, in prose, "The Man Who Would Be King," "The Finest Story in the World," "The Record of Badulla Herodotus," "Without Benefit of Clergy," "The Brushwood Boy," in verse, "Mandalay," "The Recessional," "The True Romance." Yet paying tribute to the earlier work is no reason for disparaging the achievement of the later years which many persons are inclined to overlook. To the later years belong "Kim," in which Kipling first essayed to write greatly on a broad canvas, for the earlier "The Naulakha," written in collaboration with Wolcott Balestier, and "Captains Courageous" were designed merely as entertaining tales. Then, to make the great short stories of his youth there are "An Habitation Enforced," "With the Night Mail," "They," "A Centurion of the Thirtieth" and "On the Great Wall." Poetry? In England they hold that "Sussex," written in 1902, is his masterpiece while the amazing vision as well as beauty one cannot turn too often to "France," written in 1913.

A Third Kipling

Will there be a third Kipling? Will the years to come, now that the stress of world conflict is over and the great grief coming from the personal loss is bound to be softened by the passage of time, bring forth new work to equal or surpass the old? Mr. Kipling is pressing on toward sixty years. But that is not old where it is a matter of a writing man. Far beyond sixty Hugo and Tennyson and Meredith and

WILSON'S FLY PADS

Kill them all, and the germs too. 10c a packet at Druggists, Grocers and General Stores.

Hardly were doing some of their best work, and among minor men De Morgan and Du Maurier were beginners at sixty. True, Kipling began early. He was still in his teens when he was dashing off "Barrack Room Ballads" and "Plain Tales From the Hills" and "The Story of the Gadsbys." In those days of thoughtless youth he made promises that he has not yet fulfilled.

Stories Yet To Come

Once he said, "The Blue Skallala-tot Stories are all morning stories. Why has he never told those stories? Then, in the last story of "Plain Tales From the Hills," "To Be Filled for Reference" there was allusion to a most marvelous document concerning Mother Mathurin with the promise that that, too, would be related in the course of time. If for nothing else than the making good of those promises there must be a third Kipling. We are entitled to read those tales of the Blue Skallala-tot, to be informed of the nature of the manuscript that was so treasured

by the lazier Macleod Jolliffe who said: "Good heavens! I was once an Oxford man!" Mr. Kipling still has responsibilities, even though now pressing on toward sixty years.

WEDDING BELLS

MATHESON—MCKENZIE

A very pretty wedding took place at the home of Mr. and Mrs. J. A. McKenzie, of Granum, on Thursday afternoon, August 16, when their eldest daughter, Jolie, was united in marriage to Mr. Donald A. Matheson of Granum. The ceremony was performed by Rev. Mr. Laugie. Miss Florence McKenzie, of Macleod, acted as bridesmaid, and Mr. John Matheson, brother of the groom, acted as best man.

To the strains of the wedding march, played by Miss Catherine Matheson, the bride entered the room on the arm of her father, becomingly attired in a navy blue suit of tricotine with sand blouse and hat to match, and carried a bouquet of sweet peas and baby's breath.

Immediately after the ceremony a wedding dinner was served to the relatives and most intimate friends of the couple.

Mr. and Mrs. Matheson took the evening train to Calgary amid showers of confetti and good wishes.

In Calgary a number of friends gathered at the home of the bride's aunt, Mrs. M. G. Johnston, where a buffet luncheon was served and a pleasant evening spent. Later they left for Banff and points west. On their return they will make their home in Glenora.

INFORMATION FOR SPORTSMEN

Changes in the Regulations under the Migratory Birds Convention Act affecting the shooting of migratory

Fill your pipe with

Ogden's CUT PLUG

"It Satisfies"

15¢ per packet 80¢ a 1/2 lb tin

If you roll your own ask for OGDEN'S FINE CUT (green label)

game birds in certain provinces have recently been authorized by Order in Council.

Under the Order a further closed season throughout the Dominion has been provided for Wood Duck, extending until January 31st 1924. A similar closed season has been provided for Elder Ducks, except that Elder may be shot in the Yukon and Northwest Territories during the regular open season provided for ducks in those localities.

In Manitoba shooting is now prohibited between sunset and sunrise. The open seasons provided by the Regulations under the Migratory Birds Convention Act for the season 1923-1924 for the Prairie Provinces are as follows:

Ducks, Geese, Brant and Rails

In Manitoba: September 15 to November 30, except that in that portion of the province lying to the north of the 53rd parallel of latitude

the open season on ducks shall be from September 1 to November 30 both dates inclusive.

In Alberta: September 15 to December 14, both dates inclusive.

In Saskatchewan: September 15 to December 31, both dates inclusive. Shorebirds or Waders, including only the following:

Woodcock, Wilson or Jack-Snipe, Black-bellied and Golden Plover and the Greater and Lesser Yellowlegs.

In Manitoba: September 15 to November 30, both dates inclusive.

In Saskatchewan: September 15 to December 31, both dates inclusive.

In Alberta: September 15 to December 14, both dates inclusive.

In Montreal and Quebec the hotels are reported full to the point of overflowing. In Ontario the hotel business is what they call slow. Guess the reason.

CAPITAL GOSSIP AND PROV. NEWS

Wheat Pool Incorporated

Under the name of The Alberta Co-operative Wheat Producers, Limited, the new Alberta wheat pool has been incorporated under the laws of the province with respect to co-operative associations. The week of August 20-25 has been named as the period for the campaign to secure signatures to the wheat pool contract from the farmers of the province.

Harvest Help Arriving

Practically half of the number of harvest hands required in Alberta have now been received and all placed on farms, according to the bureau of labor. During the week end about 1400 more arrived in the province and are being placed this week. Two more excursions from the East, one on the 21st and the other on the 25th will bring a large number. Manitoba is now through its harvesting season and those harvest hands now arriving from the East will come to Alberta and Saskatchewan.

Prince Coming Soon

The Prince of Wales will sail from England the first week in September to visit his ranch in Alberta, coming directly to this province as soon as landing. He will return home about the end of October. The Earl and Countess of Minto are also to spend some time on their ranch adjacent to that of the Prince.

Conventions in Alberta

Conventions which are to be held in Alberta during the next month or so include the national telephone convention in Edmonton the last week in August, the convention of sanitary engineers of Canada in Calgary Sept. 5 to 7, the Canadian Brotherhood of Trainers in Calgary Sept. 17 and 18, and the general synod of the Anglican Church of Canada in Calgary Sept. 16 to 25.

Visitors to Province

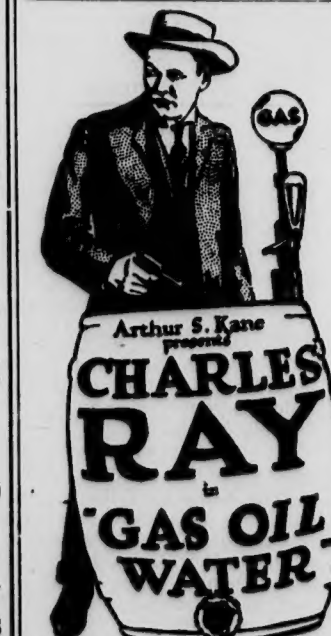

Visitors to the publicity bureau at the government buildings during the week included Mr. C. Hanbury-Williams of Montreal, journalist, who is writing a series of articles on the West for British Canadian papers; Thornton Smith, new editor of the Wisconsin Agriculturist of Racine, Wis., and Conrad F. Wright, of Stanford University, California. Mr. Wright is collecting data for the food research institute of Stanford University, and has secured a mass of statistics on Alberta crops since the formation of the province. Visitors the coming week will include Mr. Wright A. Patterson, editor-in-chief of the Western Newspaper Union of the United States.

Alberta's Death Rate

Statistics issued by the Dominion bureau of statistics give the death rates for each province of the dominion as follows:
Infant death rate—Prince Edward Island 92.7, Nova Scotia 125.3, New Brunswick 142.4, Ontario 115, Manitoba 115.4, Alberta 97.5, British Columbia 72.9, the percentage being fixed on 1000 living births. Death rate per 1000 of population—Prince Edward Island, Nova Scotia, New Brunswick and Ontario 1.1, Manitoba .7, Saskatchewan .6, Alberta .6, British Columbia .8. This shows that the death rate in Alberta and Saskatchewan is the lowest in all Canada.

Preparing for Plebiscite

Preparations are being made now for the taking of the plebiscite on November 5, on the liquor act proposals. J. D. Hunt, clerk of the executive council has issued special instructions as to the method of voting under the transferable vote system, and these instructions are to receive wide distribution in order

Charles Ray

that the public may be properly informed on the new method.

Big Western Party Coming

A party of fifty people representing the State of Maine Chamber of Commerce and Agricultural League will visit the province during the first week in September, in the course of a trail through Western Canada.

Made Good in Alberta

G. E. Boutil, who at present is staying in Idaho, in a letter written back to Alberta, tells how he purchased land in the vicinity of Edmonton 14 years ago for \$30.00 an acre and sold it in 1929 for \$95 an acre having farmed it in the intervening years.

New Alberta Senator

J. L. Cote, Liberal member of the Legislature for the riding of Grouard has been appointed to the Senate of Canada in the vacancy created by the death of Senator Forget of Banff. Mr. Cote was a former member of the Stewart Government in Alberta. His appointment to the federal house creates the second vacancy in the Alberta house, the death of Dr. State, member for Clearwater, having occurred last week.

Contracts for Branch Lines

Following the final signing of the necessary agreements by the officials of the C. P. R. and E. D. and B. C., in which there had been some delay the provincial railways department were able to award contracts the past week for construction of both the Grande Prairie and Berwyn extensions in the north country. The announcement was made during the week by Hon. V. W. Smith, minister of railways.

Opening of Schools

Definite steps are being taken by the department of education this year to eliminate as far as possible the confusion and waste of time and effort that frequently occurs in the placing of teachers in the schools of the province following the midsummer holidays.

Special instructions have been issued by Hon. Perren Baker, minister of education, to all school inspectors to concentrate upon the problem and to make it their first business to see that all the schools in their several inspectorates are open at the beginning of the term. Mr. Baker has appealed to all school boards and to teachers to co-operate to this end and to work through the inspectors in getting vacancies filled. Teachers are asked, as soon as they have secured schools, to notify all other boards to whom they may have applied for positions, and school boards are asked to notify all applicants as soon as they have filled a vacancy. With more co-operation along this line, Mr. Baker believes that the delay which frequently occurs in the opening of rural schools at the beginning of the term might be eliminated.

CHRIST CHURCH

Sunday August 26th.
11 a.m. Matins and Address (chiefly for children) followed by a plain Celebration of Holy Communion.

7.30 p.m. Evensong and Sermon. These services will be conducted by the Rev. Archdeacon Hayes.

Here is a man who gets into the personal columns of the newspapers because his sister is a golf star. Such is fame.

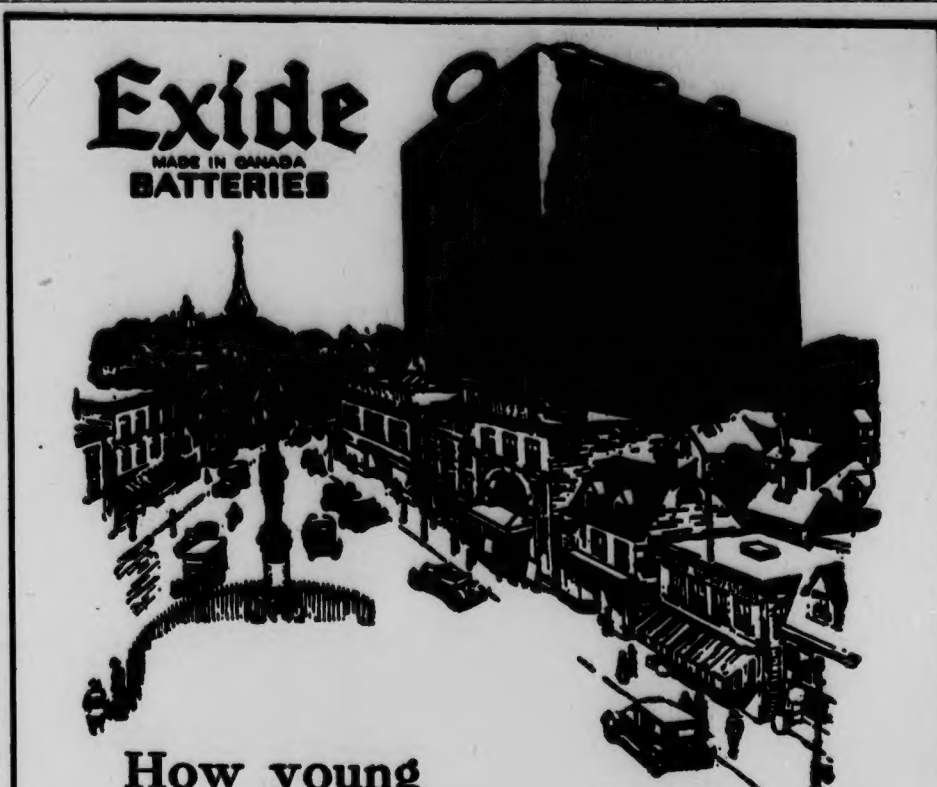

FINE DAIRY STOCK

In connection with exhibits at the recent Macleod Fair it may be mentioned that E. Wells, of Wollerville drew down first prize contributed by A. D. Ferguson for best cow any breed with "Borthmore Ormsby Queen," a registered Holstein. Mr. Wells considers this cow his best leader in fine Holsteins, which he is making a specialty of, and will later be in the market with stock from this exceptionally fine dairy animal.

The September issue of Rod and Gun in Canada contains a wealth of information and amusement for the sportsman. "The Clerical Fishing Party" by the Rev. W. A. Bradley is an original account of a real trip, while there is a practical article on making use of

Mrs. F. C. Benson, Miss Madge Benson and "Bubbles" Ferguson, who have been visiting with Mr. and Mrs. J. C. Benson of Brandon, Manitoba, for several weeks, returned to Macleod on Monday morning, accompanied by Mrs. J. C. Benson and

Ellero system, one must remember this style of impression. By reducing these shades to as many numbers one can realize that in a way it is a special code system which can be telegraphed as well as if it formed words. There is no necessity for any special system of preparing plates or apparatus—only the special index card. To a keen observer a photograph or any impression on paper is not composed of dots or points, but various geometrical forms which when put together result in a vision either photographic or geometric. To prepare a photograph for transmission by telegraph according to the Ellero system, the necessary preparations may be thus classed.

Few Preparations
1. Preparations according to chart and measurements, reducing to numbers.
2. Transmission and recombination at the other end by means of prepared chart.
3. Rephotographing the drawn impression.
Sometimes it is not necessary to enlarge a photograph as its size may be that required by the chart index. For the preparation of the code, an ordinary photographic plate with a square glass plate marked off with red lines into ninety squares, each with its number, is used. Each shading represents a number. An ordinary photograph would possibly need three or four hundred words all carefully prepared so that when the code numbers were decoded the receiver of the telegram could, with the help of the index chart, easily recombine the photograph transmitted. Commendatore Ellero has also invented a typing machine called a teleprinter, which simplifies the work of decoding, but even with a pencil and a piece of paper the code may be transposed into the same image which was sent from the other end.

Method Extremely Simple
The whole system is so simple that one wonders why it was never tried before. This question of transmitting photographs by long distance in a short time as possible has often been discussed and several other systems have been invented, which though successful are not always certain of perfect transmission. The two leading ones are those invented by Frenchman, Belin, and a German, Korn. Both these systems have had disadvantages that it requires a specialist to transmit the photos or finger prints, whereas the Ellero system anyone with average intelligence can learn how to send the telegram. The principle of his system is based on enlarging the photograph to a certain size and then arranging it by means of his chart in which its surface is divided into ninety different shadings, each shading having a number.

Korn's System
Korn's system has been tried both by radio and telegraph and is preferred by many. It is based on the properties of selenio, which resists the passing through of electricity. The prepared plate is planned so that light passes through that section of the photograph which is not prepared by selenio, which forms the background or shadow. The second system, that of Belin, consists of a relief image made by means of a gelatine plate prepared with bichromate of bromide through which electricity passes and which, by means of an asciograph, reflects the luminous rays to a sensitive paper. Commendatore Ellero is probably the greatest code expert in the world. It was he who deciphered the complex code correspondence which was found in Professor Bodrigha's possession when he was arrested recently. Bodrigha, a Communist and Soviet agent, was thought to be a Russian spy, and hence were kept in an ordinary safe. To all intents and purposes they were ordinary accounts. Commendatore Ellero after studying them for two months, deciphered a list of the Italian Communists here and abroad who were in the pay of Russia, and lists of Soviet staffs in different countries.

Master Jack, who will visit in town for a few weeks.

Mr. and Mrs. R. M. Reid, who have been holidaying in California for their vacation, returned to Macleod last week.

Quite a number of Macleod people were seen at the Baseball Tournament held at Staveland on Wednesday afternoon.

Mr. and Mrs. W. Chisholm, who of Mr. Chisholm being transferred to the Calgary branch of the Canadian Bank of Commerce, are visiting friends in Macleod for several days.

Will all the customers having slips from Palace Meat Market kindly call on the undersigned, as I am unable to get around.—E. F. Cummins, 22nd St., 2 doors from 3rd Ave. 25-11-pd

MISS A. M. WILSON

BOYS AND GIRLS

Prepare for the School Fair. Only three weeks now to get ready. WEDNESDAY, September 12th will be the GREAT DAY of the year for the Kiddies of Macleod and District, when there will be on exhibition at the Macleod Fair Grounds, the Biggest, the best and most attractive Display of Vegetables, Grains, Grasses, Domestic Products, School Work, Colts, Calves, Pigs and Chickens ever seen at a Macleod School Fair.

Then there will be all kinds of Sports and fun in the afternoon for all the boys and girls of every age and size.

The committee are making big preparations for a big day. Boys and girls do your part, get ready and send in your entries to Secretary Gardiner during the week ending Saturday, September 9th. Get your forms at once, and have them made out and ready in good time.

Don't leave that important matter till the last minute. Be early, there will be a big rush of entries, and the Secretary will be overwhelmed on the last day, and no entries will be taken after September 8th. Another thing Boys and Girls, play the game fairly on your own efforts, a third prize on your own product is much more gratifying than even a special on another's, don't take something for nothing. Every year, the Boys and Girls Fair, the Boys and Girls exhibits, not the grown ups exhibits, they had theirs on August 8th and 9th, this is your fair, and it is now coming. Every condition has been favourable this year for making it the Biggest and Best Fair YET.

**EAT VEGETABLES FOR
VITAMINS**
(L. F. Burrows, Secretary, Canadian Horticultural Council)

Comparatively recent is the addition of the word "Vitamin" to our vocabulary, and even though the use of the word is now common, its meaning is not yet understood. Physicians have long recognized the value of vegetables in the daily diet and we are now told that this value lies largely in the fact that they contain vitamins, and that vitamins are necessary to life. Some vegetables contain greater quantities and of different kinds than others. Three distinct kinds of vitamins have been named "A," "B," and "C."

Vitamin "A" is a mysterious element in food, without which children cannot grow, but which grown folks also need. Shortage of vitamin "A" leads to disease of the eye, skin and kidneys; and it may cause bad teeth, diarrhoea, pellagra, and other ailments. As a rule, seeds of all kinds are very rich in vitamin "A," although green peas contain appreciable amounts. Leafy plants on the other hand, are valuable foods in this regard. Spinach and chard are probably the richest of the common leafy foods in this element, lettuce ranks next, with cabbage holding third place.

The roots and tubers vary, sweet potatoes and carrots ranking first while white or Irish potatoes contain but a small amount, and it is doubtful if beets, rutabagas and parsnips contain appreciable amounts. Tomatoes, however, are very rich in vitamin "A," and Hubbard squash is also a valuable source. Little work has been done on the fruits but there is evidence that apples, bananas and oranges contain small amounts of this vitamin. Vitamin "B" is guardian of good digestion and proper functioning of the liver and other glands. This vitamin is found in the germ and branny portion of cereals. In the milling of wheat, however, this vitamin is so completely removed that the best grades of flour are entirely lacking. This does not mean that we should eat the whole wheat breads, starchy foods, white rice, etc.; it merely means that we must choose our foods intelligently and eat more vegetables.

Potatoes, sweet and white, contain appreciable amounts of vitamin "B," although the turnip and onion are more valuable in this regard. The beet root contains a fair amount although its leaves cover to be much richer. This vitamin is also found in the tomato, cabbage, spinach, lettuce, parsley, and the lowly dandelion, the tomato being especially valuable.

Why many fruits have not been studied, it is probably safe to state that most fruit juices contain appreciable amounts of vitamin "B." It is likewise probable that nuts are valuable sources of this vitamin inasmuch as all nuts that have been studied contain appreciable amounts.

Vitamin "C" prevents disease and promotes the general health. Lack of it gives the skin a sallow color and makes the heart weak. It has long been known that lemons, limes, oranges, and fresh fruits are curative in scurvy. It has only been in recent years that we have understood that this curative effect was due to vitamin "C." While oranges have been used for a number of years in the treatment of infantile scurvy, it is only recently that it has become the common practise to supply orange juice to infants, as part of the regular feeding practice. More recently it has been discovered that tomato juice is practically equal to the juice of the orange in this regard, and many physicians in the poorer districts of the large cities are prescribing strained tomato juice in place of orange juice. The juice of canned tomatoes seems to be very satisfactory for this purpose, indicating that the canning process is not particularly destructive as far as vitamin "C" is concerned. Berries are known to have scurvy-curing properties, although little investigation work has been done.

The Swedish turnip or rutabaga is very valuable as a source of vitamin "C" and the same is true of the carrot. Young carrots are apparently more valuable than old carrots and this appears to be true for the younger the better. It is probably safe to state that the vitamin content of vegetables is highest at the time that the vegetable is most prized from the standpoint of flavor and taste. Most vegetables, onions and parsnips are also considered valuable anticancerous foods. Rhubarb, lettuce and cauliflower must also be included in the list. While lemons and limes are a source of vitamin "C" and the same is true of the carrot. Young carrots are apparently more valuable than old carrots and this appears to be true for the younger the better. It is probably safe to state that the vitamin content of vegetables is highest at the time that the vegetable is most prized from the standpoint of flavor and taste. Most vegetables, onions and parsnips are also considered valuable anticancerous foods. Rhubarb, lettuce and cauliflower must also be included in the list. While lemons and limes are a source of vitamin "C" and the same is true of the carrot. Young carrots are apparently more valuable than old carrots and this appears to be true for the younger the better. It is probably safe to state that the vitamin content of vegetables is highest at the time that the vegetable is most prized from the standpoint of flavor and taste. Most vegetables, onions and parsnips are also considered valuable anticancerous foods. Rhubarb, lettuce and cauliflower must also be included in the list. While lemons and limes are a source of vitamin "C" and the same is true of the carrot. Young carrots are apparently more valuable than old carrots and this appears to be true for the younger the better. It is probably safe to state that the vitamin content of vegetables is highest at the time that the vegetable is most prized from the standpoint of flavor and taste. Most vegetables, onions and parsnips are also considered valuable anticancerous foods. Rhubarb, lettuce and cauliflower must also be included in the list. While lemons and limes are a source of vitamin "C" and the same is true of the carrot. Young carrots are apparently more valuable than old carrots and this appears to be true for the younger the better. It is probably safe to state that the vitamin content of vegetables is highest at the time that the vegetable is most prized from the standpoint of flavor and taste. Most vegetables, onions and parsnips are also considered valuable anticancerous foods. Rhubarb, lettuce and cauliflower must also be included in the list. While lemons and limes are a source of vitamin "C" and the same is true of the carrot. Young carrots are apparently more valuable than old carrots and this appears to be true for the younger the better. It is probably safe to state that the vitamin content of vegetables is highest at the time that the vegetable is most prized from the standpoint of flavor and taste. Most vegetables, onions and parsnips are also considered valuable anticancerous foods. Rhubarb, lettuce and cauliflower must also be included in the list. While lemons and limes are a source of vitamin "C" and the same is true of the carrot. Young carrots are apparently more valuable than old carrots and this appears to be true for the younger the better. It is probably safe to state that the vitamin content of vegetables is highest at the time that the vegetable is most prized from the standpoint of flavor and taste. Most vegetables, onions and parsnips are also considered valuable anticancerous foods. Rhubarb, lettuce and cauliflower must also be included in the list. While lemons and limes are a source of vitamin "C" and the same is true of the carrot. Young carrots are apparently more valuable than old carrots and this appears to be true for the younger the better. It is probably safe to state that the vitamin content of vegetables is highest at the time that the vegetable is most prized from the standpoint of flavor and taste.
